Kristof Pipeleers

Data Analytics Engineer

I turn business knowledge into simple, reliable data models on Microsoft Fabric and dbt, and bring AI agents into the data platform in a secure, reviewable way.

01 EXPERIENCE

Data Analytics Engineer — 2024 — Present

Sparkle NV

- International trading group: built a finance data platform on Fabric and dbt that unifies several ERPs across countries, using Data Vault, reconciliation against the legacy system, row-level security and CI/CD across four environments.
- Public-sector IT services company: split a monolithic Fabric setup into integration, transformation and consumption workspaces, archived ~275 legacy dbt models and set up central monitoring and alerting.
- Traced half a day per week of manual invoice corrections back to the linking logic, and raised automatic invoice-to-order matching to ~81%.
- Built an ontology and knowledge graph on governed gold models, so a Fabric data agent answers multi-hop business questions within row-level security.
- Brought AI coding agents into daily delivery behind isolated branches, a convention-checking reviewer agent, CI checks and human-approved production releases.

Microsoft Fabric · dbt · Data Vault · Power BI · Fabric IQ · Claude Code

Innovation Internship — 2023 — 2024

werecircle

- Prototyped chatbots and generative-AI tools with OpenAI, LangChain and LlamaIndex, and competed in the Microsoft OpenAI Hackathon.
- Explored Azure ML Studio (Prompt Flow), AI Studio and web scraping, working independently in a start-up environment.

02 EDUCATION

Postgraduate Programme in Innovation & Entrepreneurship in Engineering — 2023 — 2024

KU Leuven

Specialized program focusing on innovation management, business development, and entrepreneurial skills in engineering contexts.

Master's in Industrial Sciences: Internet Computing — 2022 — 2023

KU Leuven Campus Groep T

Advanced studies in cloud computing, distributed systems, and web technologies, with a master's thesis focused on a machine learning topic.

Bachelor's in Industrial Sciences: Electronics-ICT — 2019 — 2023

KU Leuven Campus Groep T

Foundation in electronics and information technology, covering programming, networking, and system design. Gained practical experience through hands-on (team) projects and laboratory work.

Science & Mathematics — 2013 — 2019

Scholen Kindsheid Jesu

Proper foundation in mathematics, sciences, and analytical thinking.

03 EXPERTISE

Data Platforms
Fabric + dbt platforms with Data Vault, CI/CD across environments and proactive monitoring.

Business-Ready Models
Semantic models, Power BI and data-quality worklists built with the business.

AI in the Data Platform
Ontologies, data agents and AI-assisted engineering with guardrails.

04 HOW I WORK

Understand what is built
Whoever writes the code, me or an agent, I make sure I understand what was built and why.

Keep models simple
I turn business knowledge into simple, documented models that both people and AI agents can read.

AI, with guardrails
From manual work to daily agents, behind reviews, tests in dev and human-approved releases.

Remote by default, together when it matters
Remote from Madrid coworking spaces, and in person when it builds trust.
